

Aerial Work Platforms

There are many accessories intended for forklifts that could be used so as to help expand the capabilities of your forklift and allow you to lift things, handle materials with greater ease or to accomplish clean-up tasks.

Many of the accessories are specifically designed so as to fit on the blades themselves. Blade extensions for instance, are utilized if you need a lot more blade length, that increases lifting capacity. Blade extensions come in lengths ranging from forty eight to one hundred twenty inches. Rounded or triangular attachments are another type used if transporting rolled material in order to make certain it does not roll off of the standard flat forks.

Lifting accessories can be pivoting and telescoping crane attachments. They are available in various kinds. These attachments are often utilized for transporting lumber, metal bars, poles or whichever kind of bulky stuff. Additional attachments like for instance other styles of hooks and hook plates are presented in order to lift stuff using a sling or chain. Magnetic lifters and slab lifters are other stuff which can be used with hook accessories. Slab lifters are specialized accessories which are used for picking up a variety of materials that are delivered in a slab or sheet format. Carpet poles and rug rams are other lifting tools which connect to your forklift so as to make transferring rolls of carpet a lot easier. The accessory hooks onto the lift truck's blades and has a pole which goes through the middle of the carpet roll.

There are numerous different types of forklift attachments that can be utilized for facility maintenance such as snow forks. These blades connect to front end loaders and could transfer materials like for example dirt, soil and snow. Other common cleanup attachments consist of magnetic sweepers and standard sweepers. Standard sweepers consist of a broom that the forklift blades connect onto for sweeping large spaces like parking lots or warehouse and factory floors. The magnetic sweeper is the same except that it has a magnetic plate instead of bristles. The magnetic sweeper is used in areas where there is lots of metal fragments such as on shop floors for example. Sweepers have widths as much as 60 inches and this surface area makes clean up simple and quick.

Material spreaders are other attachments utilized on forklifts. These spreaders are handy for various applications like for example spreading seeds, ice melt, rock salt, pellets, fertilizers and insecticides.

Another optional lifting attachment are work platforms. These could be used by many various companies on a daily basis. Platforms may vary in size from 36" x 36" to up to 60" x 60". Several models may be accessible and are capable of folding up and storing into a smaller place. Work platforms are designed to raise workers up to an overhead location with the use of the forklift. Larger platform units have added space for staff in order to carry tools and other necessary things intended for the job. Often work platforms are made of steel or ploy material.
